May 18, 2015

The attached table is our initial release of a weekly crop ET update using current CIMIS weather conditions and in cooperation with the California Department of Water Resources. Also included is the additional calculated water required for different levels of irrigation efficiency / distribution uniformity and a running total for the year. We will be trying to get this out weekly and keep a running posting on my website. Let me know if this is helpful and how you think it could be improved.

Blake Sanden, Irrigation and Agronomy Farm Advisor
